## Rationale for the Market Consultation

Solactive AG is constantly reviewing its indices and the application of the index calculation logic for various use cases. For the below affected Indices, Solactive has decided to propose a methodology change to provide a more replicable approach to the reinvestment of dividends.

## Proposed Changes to the Index Guideline

The Affected Indices are currently calculated using the formula of a Standard Index as defined in section 1.2.1 of the Equity Index Methodology available on the Solactive website:

<https://www.solactive.com/documents/>

The proposed changes refer to the index calculation itself and the corporate action adjustment (section 2.1.1.1 and following sections of the Equity Index Methodology referring to the Standard Index).

The intention is to amend the calculation formula for the Affected Indices to the Divisor Index logic as defined in section 1.2.2 of the Equity Index Methodology (the index calculation itself and the corporate action adjustment are to be changed as referred to in section 2.1.1.2 and following sections).

To illustrate the change, the calculation formula will change from:

$$Index_t = \sum_{i=1}^n x_{i,t} * p_{i,t} * f_{i,t}$$

To

$$Index_t = \frac{\sum_{i=1}^n S_{i,t} * p_{i,t} * f_{i,t} * WCF_{i,t} * FFF_{i,t}}{D_t}$$

Further definition of the information on the Symbols included in the above formulas are available in the Equity Index Methodology on the pages 4 and 5.

As a result, all relevant paragraphs which refer to the calculation of the Affected Indices and, if applicable to the rebalance specific procedure will be amended to comply with the Divisor Index standards.

Feedback on the proposed changes
