## Solactive eSports Stocks Equity 15% VT Index

### DESCRIPTION

The Solactive eSports Stocks Equity 15% VT Index (the "Index"):

The Index takes a variable exposure to the Underlying Index with the aim to achieve an annualized volatility of less than or equal to 15%. The Index therefore notionally invests in the Underlying Index in excess of a hypothetical money market position at the 3-month USD Libor rate (as published on Thomson Reuters under the RIC USD3MFSR=, Bloomberg US0003M Index). The index allows a maximal leverage of 150%.

### HISTORICAL PERFORMANCE

\* Base Date: April 1, 2019, values prior to April 1, 2019 for the Index are based on hypothetical performance data derived using the Index rules as of April 1, 2019, but applied retroactively using historical stock and money market position levels. You should not take the hypothetical performance data of the Index as an indication of the future performance of the Index. Past performance is no guarantee of future results and may be lower or higher than current performance.
